Lab 4

A simple web-based email program

<i>Name</i>	<i>ID</i>
<i>Mariam Mohamed Ahmed</i>	<i>19017274</i>
<i>Yara Hossam Abdulaziz</i>	<i>19016871</i>
<i>Nourhan Ahmed Arafa</i>	<i>19016812</i>
<i>Nada Mohamed Ibrahim</i>	<i>19016782</i>

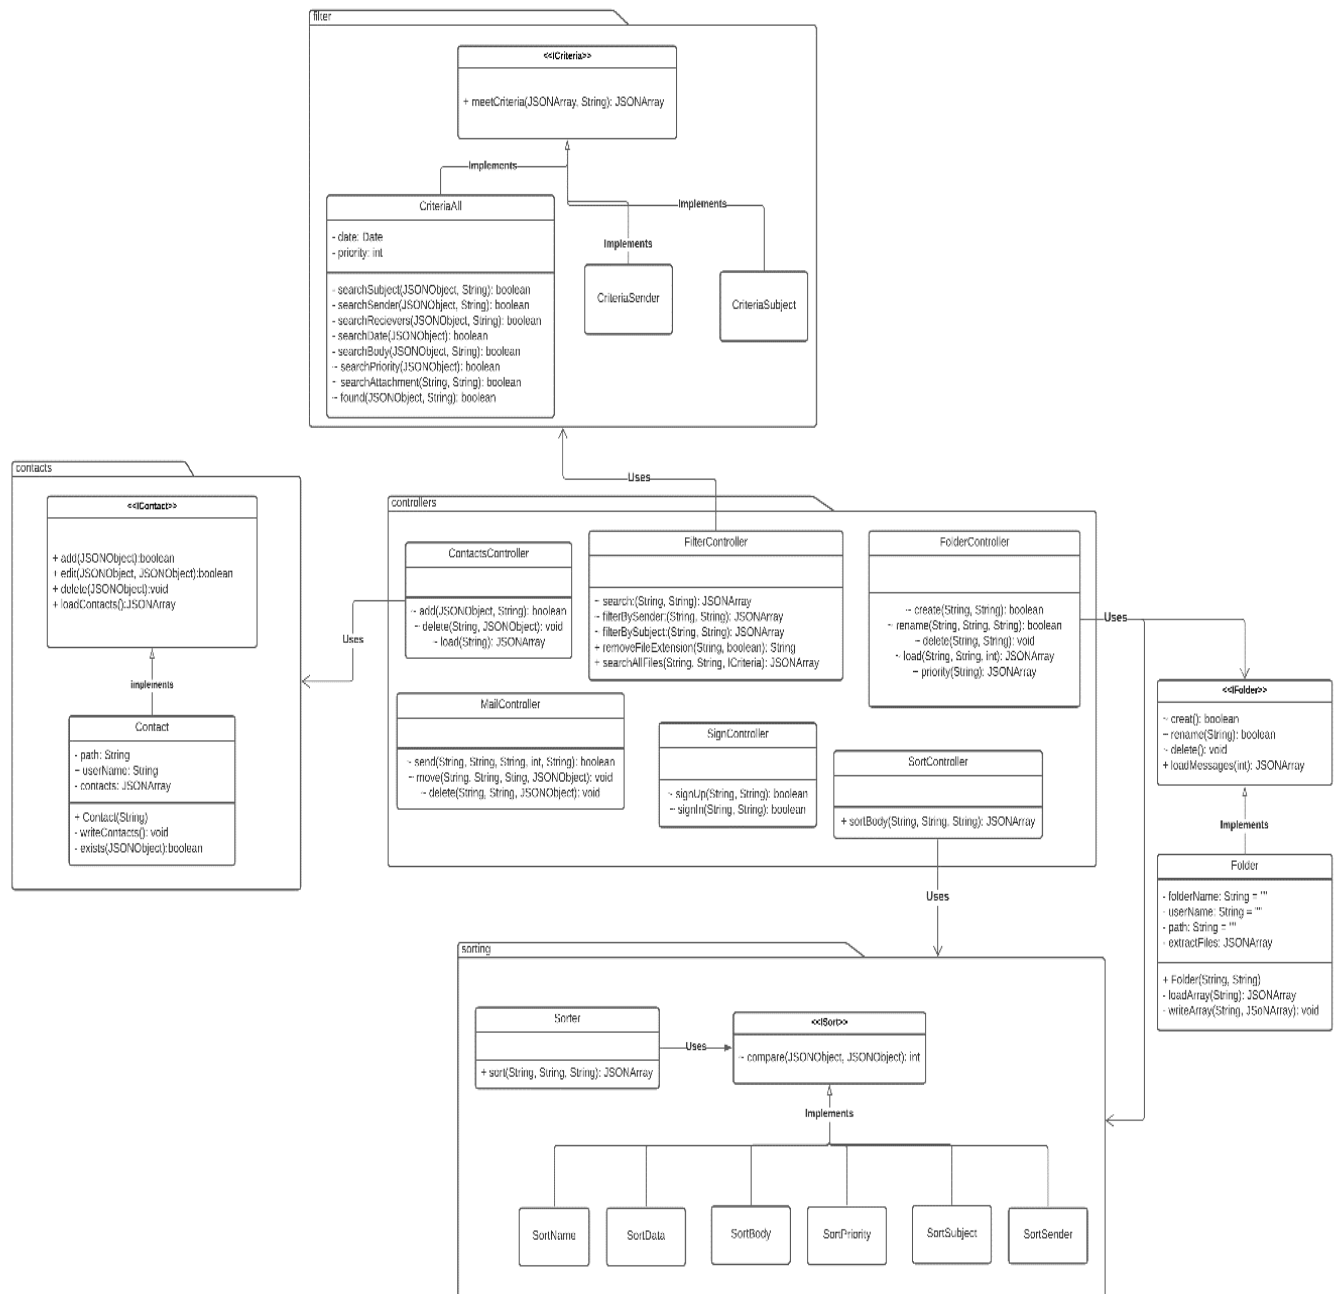

How to run the code

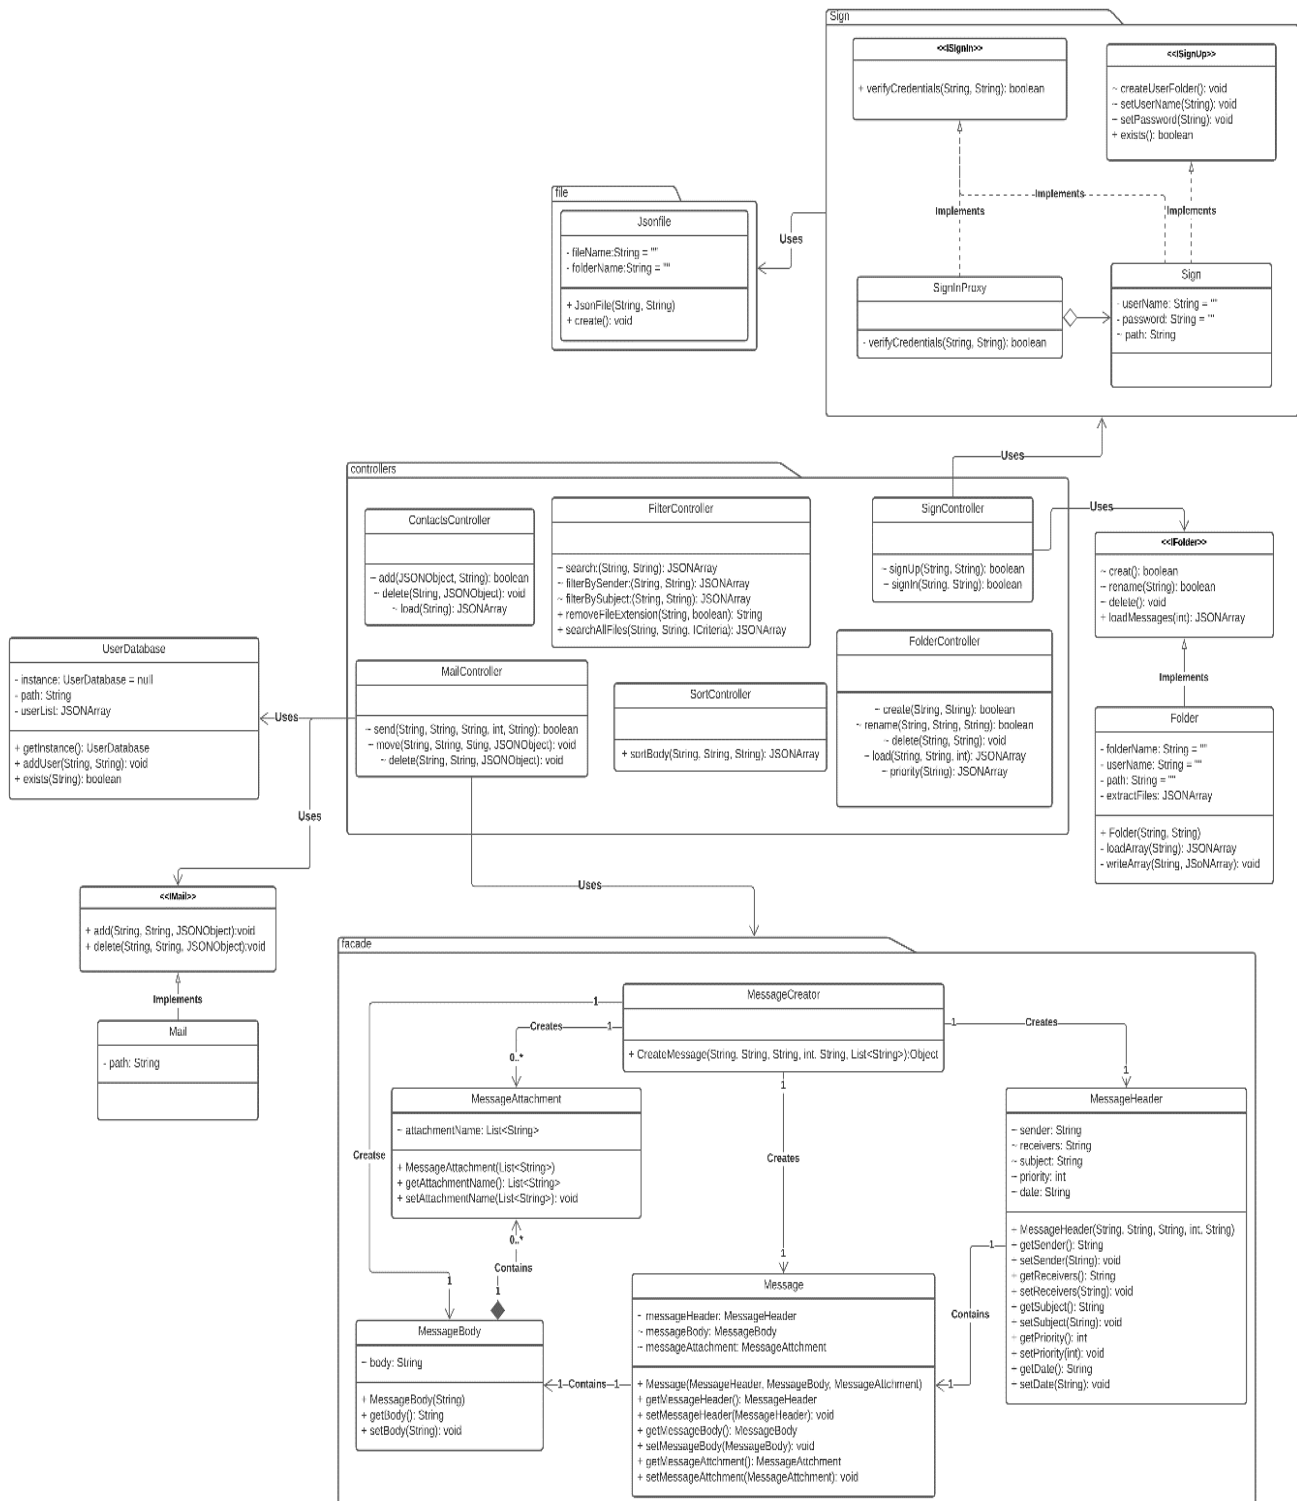

You need to import some packages, components, and decorators to run the program in a full phase.

- Front-End (run on localhost 4200)
 - HttpClient: to allow sending requests to the server.
 - Injectable: to mark a class as available to be provided and injected as a dependency.
 - FormModule: to allow extracting inputs from forms.
 - Routing: interpret a browser URL as an instruction to navigate to a client-generated view.
 - Partitioning: provide navigation between paged information.
- Back-End (run on localhost 8080)
 - org.springframework.boot.SpringApplication
 - org.springframework.boot.autoconfigure.SpringBootApplication: to allow running spring application.
 - org.json.simple.JSONArray: to allow dealing with arrays in form of json arrays.
 - org.json.simple.JSONObject: to allow dealing with the objects in form of json objects.
 - org.json.simple.parser.JSONParser: for enabling parsing values.
 - org.json.simple.parser.ParseException: for using methods to handle invalid JSON and parsing errors.
 - java.io.FileReader, java.io.FileWriter: to read and write a stream of characters from and to files.
 - import java.io.IOException: for handling any exceptions.

Design Patterns

- For the Back-End, We used five design patterns:
 - Façade design pattern:
Used to create and send email messages.
 - Filter design pattern:
Used to filter emails according to different criteria
 - Proxy design pattern:
Used to perform verification before the request gets through the original object.
 - Singleton design pattern:
Single database object shared by different parts of the program.

Fundamental DP:

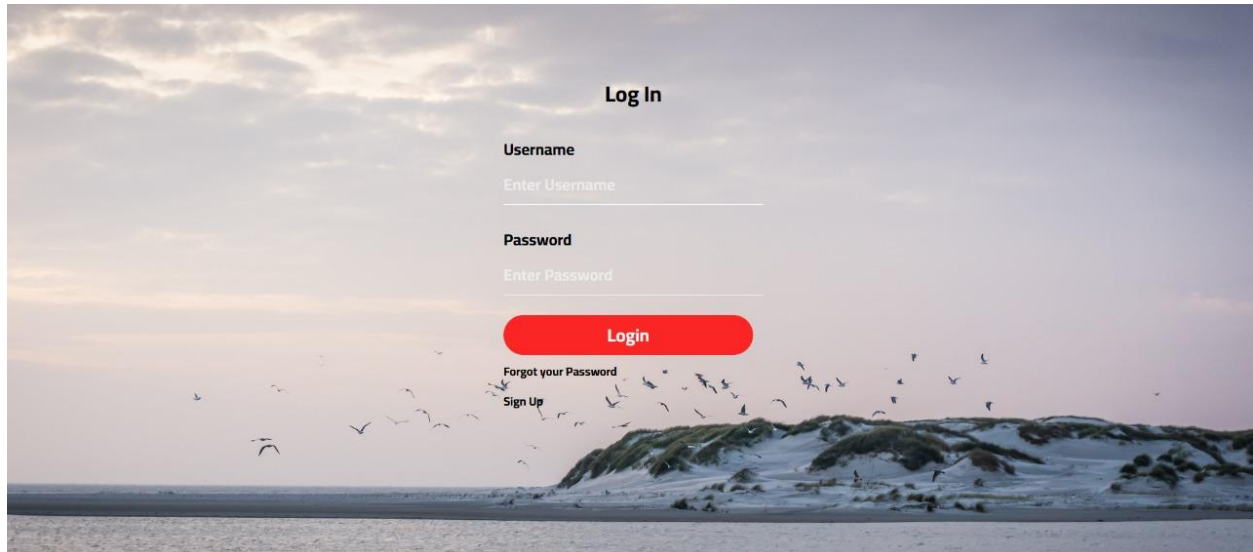

- Interface: Keep classes that uses data and services provided by instances of other classes independent of those classes by having those instances through an interface.
- MVC

Design Decisions

1. Filtering directs the results to a new user folder.
2. It's prohibited to have 2 contacts or folders with the same name.
3. Emails are retrieved using pagination.
4. Any file type of attachment is supported.
5. Trash messages are auto deleted after 30 days.

Snapshots of the UI

- The UI
LogIn page

A screenshot of a login page with a background image of a beach at sunset with many birds flying. The page has a white login form in the center. The form includes a title 'Log In', a 'Username' label with an input field containing 'Enter Username', a 'Password' label with an input field containing 'Enter Password', a red 'Login' button, a 'Forgot your Password' link, and a 'Sign Up' link.

Contact:

User Guide:

1. Signup / login if the user exists.
2. The user will be directed to the main page.
3. Default (Inbox) and user folders will appear on the left panel.
4. You can compose a new message/draft from the New Mail button.
5. You can add a new folder by pressing Add folder button, then entering the folder name.
6. Filtering is according to sender/subject. After choosing a criteria, a dialog box will appear to enter the sender/subject criteria and folder name where the filter results will be directed to.
7. To view your contacts, press the Your Contacts button which will direct you to the contacts page where you can add, view, edit, delete any contact.
8. To bulk delete, you can either select all the elements to be deleted and press the delete button
